Abstract. The abstract will be put here, \dots

Contents

Date: (None).

Formula for Introduction

GLi:

A good paper introduction is fairly formulaic. If you follow a simple set of rules, you can write a very good introduction. The following outline can be varied. For example, you can use two paragraphs instead of one, or you can place more emphasis on one aspect of the intro than another. But in all cases, all of the points below need to be covered in an introduction, and in most papers, you don't need to cover anything more in an introduction.

1. Introduction

At a high level, what is the problem area you are working in and why is it important? It is important to set the larger context here. Why is the problem of interest and importance to the larger community?

This paragraph narrows down the topic area of the paper. In the first paragraph you have established general context and importance. Here you establish specific context and background.

"In this paper, we show that ...". This is the key paragraph in the intro - you summarize, in one paragraph, what are the main contributions of your paper given the context you have established in paragraphs 1 and 2. What is the general approach taken? Why are the specific results significant? This paragraph must be really good.

You should think about how to structure these one or two paragraph summaries of what your paper is all about. If there are two or three main results, then you might consider itemizing them with bullets or in test.

- e.g., First ...
- e.g., Second ...
- e.g., Third ...

Motivation

What is the specific problem considered in this paper?

Contribution

If the results fall broadly into two categories, you can bring out that distinction here. For example, "Our results are both theoretical and applied in nature. (two sentences follow, one each on theory and application)"

Keep this at a high level, you can refer to a future section where specific details and differences will be given. But it is important for the reader to know at a high level, what is new about this work compared to other work in the area.

"The remainder of this paper is structured as follows..." Give the reader a roadmap for the rest of the paper. Avoid redundant phrasing, "In Section 2, In section 3, ... In Section 4, ... " etc.

Test citation [?]. and [?] or?]. This is for??, and this is for??.

Number: 123, 10, 30, 50 and 70, 10 to 30, 10 m, 30 m and 45 m, and 10 %

At a high level what are the differences in what you are doing, and what others have done?

A roadmap for the rest of the paper

GLi:

A few general tips:
Don't spend a lot of
time into the introduction telling the
reader about what you
don't do in the paper. Be clear about
what you do do. Does
each paragraph have

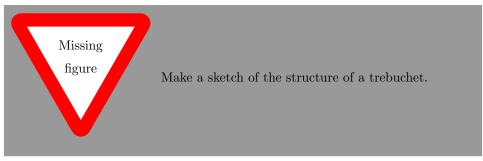

We have $10 \,\mathrm{Hz}$, kg m s⁻¹, the range: $10 \,\mathrm{Hz}$ to $100 \,\mathrm{Hz}$. $^{1}/_{2}$.
